#### Main Functions (For details, see page 26.)

Key lock	Locks the keys from functioning.
Peak/Bottom values holding	Displays the maximum and minimum values being set and can keep those values on the display.
Auto-preset	Able to set the pressure automatically. In the case of adsorption confirmation, it memorizes the pressure when adsorbed and released. By repeating several times, the optimum values are calculated automatically.
Auto-shift	Stable switch output is available even though the supply pressure may fluctuate. Automatically corrects the set value in accordance with the fluctuations in the supply pressure.
Display calibration	Able to adjust the displayed value ( $\pm$ 5%) and justify distribution of the values displayed on respective pressure switch.
Anti-chattering	Prevents malfunction due to sharp pressure fluctuations. The detection of momentary pressure fluctuation as abnormal pressure can be prevented by changing the setting of the response time.

# **Compact Pressure Sensor For Pneumatics**

Series PSE530

Series		Rated pressure range				
	-100 kPa	0	100 kPa	500 kPa	1 MPa	
PSE530		0		)	1 MPa	
PSE531	–101 kPa	0				
PSE532		0	101 kPa			
PSE533	-101 kPa		101 kPa			

Application examples

Low pressure sensor (PSE532- $\square$ ) is used to detect minute differentiations. Auto-shift function reduces influence of fluctuations in the supply pressure.

Range	Rated pressure range	С	D	F
For low differential pressure	0 to 2 kPa	0	2 kPa	–0.2 kPa

#### Internal Circuit

#### PSE3⊡0

NPN open collector output (2 outputs), Max. 30 V or 80 mA, residual voltage 1 V or less Analog output: 1 to 5 V

Output impedance: Approx. 1 k $\Omega$ 

#### PSE3□1

NPN open collector output (2 outputs), Max. 30 V or 80 mA, residual voltage 1 V or less Analog output: 4 to 20 mA

Maximum load impedance: 300  $\Omega$  (12 VDC), 600  $\Omega$  (24 VDC) Minimum load impedance: 50  $\Omega$ 

#### PSE3□2

NPN open collector output with auto-shift input (2 outputs), Max. 30 V, 80 mA, residual voltage 1 V or less

Note: The colors in parentheses indicate the color of the lead wire when it is connected to the power supply / output connection cable (ZS-28-A).

#### Descriptions

#### LCD

Displays the current pressure, set mode, selected display unit, and error code. Four different display settings are available. Always use red or green display; or switch between green and red according to the output.

#### Output (OUT1) display (Green)

Lights up when OUT1 is turned ON.

#### Up button

Use this button to select the mode or increase the  $\ensuremath{\mathsf{ON/OFF}}$  set value.

It is also used for switching to the peak display mode.

# OSMC PRESSURE OUT1 OUT2

SMC

Output (OUT2) display (Red)

Lights up when OUT2 is turned ON.

#### SET button

Use this button to change the mode or confirm the set value.

#### **Down button**

Use this button to select the mode or decrease the ON/OFF set value. It is also used for switching to the bottom display

It is also used for switching to the botton mode.

#### PSE3□3

PNP open collector output (2 outputs), Max. 80 mA, residual voltage 1 V or less Analog output: 1 to 5 V

Output impedance: Approx. 1 k $\Omega$ 

#### PSE3□4

PNP open collector output (2 outputs), Max. 80 mA, residual voltage 1 V or less Analog output: 4 to 20 mA

Maximum load impedance: 300  $\Omega$  (12 VDC), 600  $\Omega$  (24 VDC) Minimum load impedance: 50  $\Omega$ 

#### PSE3□5

PNP open collector output with auto-shift input (2 outputs), Max. 80 mA, residual voltage 1 V or less

#### **Function Details**

#### A Auto-shift function

When there are large fluctuations in the supply pressure, the switch may fail to operate correctly. The auto-shift function compensates such supply pressure fluctuations. It measures the (differential) pressure at the time of auto-shift signal input and uses it as the reference (differential) pressure to correct the set value on the switch.

#### Set value correction by auto-shift function

	A Auto-shift input time	B Switch output response time at time of auto-shift input		
PSE200	10 ms or more	15 ms or less		
PSE300	5 ms or more	10 ms or less		

#### \* Rectified value

When the auto-shift is selected, "ooo" will be displayed for approximately 1 second, and the pressure value at that point will be saved as a rectified value "C\_5" (for CH1 of PSE200 and PSE300) or "C\_3" (for CH2 to 4 for PSE200). Based on the saved rectified values (Note), the set value "P\_1" to "P\_4" (for PSE200) or "P\_1", "H\_1", "P\_3", "H\_2" (for PSE300) will likewise be rectified.

Note) When an output is reversed, "n\_1" to "n\_4" (for PSE200) or "n\_1", "H\_1", "n\_3", "H\_2" (for PSE300) will be rectified.

#### Possible Set Range for Auto-Shift Input

PSE200	Regulating pressure (Differential pressure) range	Possible set range	
Compound pressure	–101.0 to 101.0 kPa	–101.0 to 101.0 kPa	
Vacuum	10.0 to –101.0 kPa	101.0 to –101.0 kPa	
Low pressure	–10.0 to 101.0 kPa	–100.0 to 101.0 kPa	
Desitive pressure	-0.1 to 1.000 MPa	-1.000 to 1.000 MPa	
Positive pressure	—	—	
Low differential pressure		—	

PSE300	Regulating pressure (Differential pressure) range	Possible set range	
Compound pressure	–101.0 to 101.0 kPa	-101.0 to 101.0 kPa	
Vacuum	10.0 to -101.0 kPa	101.0 to -101.0 kPa	
Low pressure	–10 to 100.0 kPa	-100.0 to 100.0 kPa	
	-0.1 to 1.000 MPa	-1.000 to 1.000 MPa	
Positive pressure	–50 to 500 kPa	–500 to 500 kPa	
Low differential pressure	–0.2 to 2.00 kPa	-2.00 to 2.00 kPa	

#### Auto-shift zero (Series PSE300 only)

The basic function of auto-shift zero is the same as the function for auto-shift. Also it corrects values on the display, based on a pressure value of 0, when the auto-shift is selected.

#### **B** Auto-preset function

Auto-preset function, when selected in the initial setting, calculates and stores the set value from the measured (differential) pressure. The optimum set value is determined automatically by repeating vacuum and break with the target workpiece several times.

#### Formula for Obtaining the Set Value

	P_1 or P_3	P_2(H_1) or P_4(H_2)
PSE200	P_1(P_3)=A-(A-B)/4	P_2(P_4)=B+(A-B)/4
<b>PSE300</b>		H_1(H_2)=(A-B)/2

#### C Precision indicator setting

This function eliminates slight differences in the output values and allows uniformity in the numbers displayed. Displayed values of the pressure sensors can be adjusted to within  $\pm 5\%$ .

Note) When the precision indicator setting function is used, the set (differential) pressure value may change  $\pm 1$  digit.

#### D Peak and bottom display function

This function constantly detects and updates the maximum and minimum values and allows to hold the display value. For PSE300, when the  $\triangle \bigtriangledown$  are simultaneously pressed for 1 second or longer, while "holding", the hold value will be reset.

#### E Key lock function

This function prevents incorrect operations such as accidentally changing the set value.

#### F Reset function

This function clears and resets the zero value on the display of measured (differential) pressure within  $\pm7\%$  F.S. of the factory adjusted value.

# Series PSE200/300

#### **Function Details**

#### **G** Error indication function

Error	Error code			Description	
name	PSE	200	PSE300	Description	
urrent ror	Er	{	Er l	Load current of switch output (OUT1) exceeds 80 mA.	
Overc er	Er	2	ErZ	Load current of switch output (OUT2) exceeds 80 mA.	
Residual pressure error	Er 3 Er 3		Er]	Pressure applied during the zero reset operation exceeds ±7% F.S. * After displaying the error code for 3 seconds, the switch automatically returns to the measuring mode. Due to individual product differences, the setting range varies ±4 digits.	
Applied pressure error	-		ннн	Supply pressure exceeds the maximum set (differential) pressure or upper limit of the display pressure.	
	LLL		LLL	A sensor may be disconnected or mis- wired. Or, supply pressure is below the minimum set (differential) pressure or lower limit of the display pressure.	
Auto-shift error	or		Qr	The value measured at the time of auto- shift input is outside the set (differential) pressure range. * After displaying the error code for one second, the switch returns to the measuring mode.	
	Er	5	٤rЧ	Internal data error	
m error	Er 6 Er6		Er 6	Internal data error	
Syster	Er	r 7 Er7		Internal data error	
	Er	8	Er 8	Internal data error	

#### H Copy function (Series PSE200 only)

Information that can be copied includes the following: 1 Pressure set values, 2 Range settings, 3 Display units, 4 Output modes, 5 Response times.

- When CH1 is copied to CH2, CH3, and CH4, information of OUT1 in CH1 will be copied.
- When CH2, CH3, or CH4 is copied to CH1, information of OUT1 in CH2, CH3, or CH4 will be copied only to OUT1 in CH1.
- Note) When the copy function is used, the regulating pressure value of the copied channel may change  $\pm 1$  digit.

#### Auto-identification function (Series PSE200 only)

This function automatically identifies the pressure range of the pressure sensor that is connected to the multi-channel pressure sensor controller, thus eliminating the need of having to reset the range again after replacing the sensor. This function will be activated either when "Aon" is set in the auto-identification mode or when the power is turned back on in that condition. However, this function only works in conjunction with specific pressure sensors (SMC Series PSE53 $\Box$ ). When other pressure sensors are used, this function will not work. When using other types of pressure sensors, first set the auto-identification mode to "AoF", and then proceed to setting the range. Turning the power back on while in the "Aon" setting can cause a malfunction.

#### J Anti-chattering function

A large bore cylinder or ejector consumes a large volume of air in operation and may experience a temporary drop in the supply pressure. This function prevents detection of such temporary drops in the supply pressure as an error.

	Available response time settings				
PSE200	20 ms, 160 ms, 640 ms				
PSE300	20 ms, 160 ms, 640 ms, 1280 ms				

<Principle>

This function averages pressure values measured during the response time set by the user and then compares the average pressure value with the pressure set point value to output the result on the switch.

#### K Anti-chattering function (Series PSE200 only)

Pressure value for the selected channel is displayed.

#### L Anti-chattering function (Series PSE200 only)

Pressure values for each channel are displayed by turns at 2-second intervals.

#### **Function Details**

#### M Unit display switching function

Display units can be switched with this function. Units that can be displayed vary depending on the range of the pressure sensors connected to the controller.

# Series PSE Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by labels of **"Caution"**, **"Warning"** or **"Danger"**. To ensure safety, be sure to observe ISO 4414 <sup>Note 1)</sup>, JIS B 8370 <sup>Note 2)</sup> and other safety practices.

#### Explanation of the Labels

<b>A Danger</b> In extreme conditions, there is a possible result of serious injury or loss of life.	
Marning         Operator error could result in serious injury or loss of life.	
<b>Caution</b> Operator error could result in injury Note 3) or equipment damage. Note 4)	

Note 1) ISO 4414: Pneumatic fluid power - General rules relating to systems

Note 2) JIS B 8370: General Rules for Pneumatic Equipment

Note 3) Injury indicates light wounds, burns and electrical shocks that do not require hospitalization or hospital visits for long-term medical treatment. Note 4) Equipment damage refers to extensive damage to the equipment and surrounding devices.

#### ■ Selection/Handling/Applications

1. The compatibility of the pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or post analysis and/or tests to meet the specific requirements. The expected performance and safety assurance are the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalog information with a view to giving due consideration to any possibility of equipment failure when configuring a system.

- **2. Only trained personnel should operate pneumatically operated machinery and equipment.** Compressed air can be dangerous if handled incorrectly. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators. (Understanding JIS B 8370 General Rules for Pneumatic Equipment, and other safety rules are included.)
- 3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.
  - 1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driven objects have been confirmed.
  - When equipment is removed, confirm that safety process as mentioned above. Turn off the supply pressure for this equipment and exhaust all residual compressed air in the system, and release all the energy (liquid pressure, spring, condenser, gravity).
     Before machinery/equipment is restarted, take measures to prevent quick extension of a cylinder piston rod, etc.
- 4. If the equipment will be used in the following conditions or environment, please contact SMC first and be sure to take all necessary safety precautions.
  - 1. Conditions and environments beyond the given specifications, or if product is used outdoors.
  - Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
  - An application which has the possibility of having negative effects on people, property, requiring special safety analysis.
     If the products are used in an interlock circuit, prepare a double interlock style circuit with a mechanical protection function for the prevention of a breakdown. And, examine the devices periodically if they function normally or not.

#### ■ Exemption from Liability

- 1. SMC, its officers and employees shall be exempted from liability for any loss or damage arising out of earthquakes or fire, action by a third person, accidents, customer error with or without intention, product misuse, and any other damages caused by abnormal operating conditions.
- 2. SMC, its officers and employees shall be exempted from liability for any direct or indirect loss or damage, including consequential loss or damage, loss of profits, or loss of chance, claims, demands, proceedings, costs, expenses, awards, judgments and any other liability whatsoever including legal costs and expenses, which may be suffered or incurred, whether in tort (including negligence), contract, breach of statutory duty, equity or otherwise.
- 3. SMC is exempted from liability for any damages caused by operations not contained in the catalogs and/or instruction manuals, and operations outside of the specification range.
- 4. SMC is exempted from liability for any loss or damage whatsoever caused by malfunctions of its products when combined with other devices or software.

### Series **PSE5 Specific Product Precautions 1**

Be sure to read before handling.

Refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Safety Instructions and Pressure Switches Precautions.

#### Pressure Sensors

Handling

### \land Warning

- 1. Do not drop, bump, or apply excessive impact (PSE530, 540: 980 m/s<sup>2</sup>, PSE560: 500 m/s<sup>2</sup>, PSE550: 300 m/s<sup>2</sup>) while handling. Although the body of the sensor may not be damaged, the inside of the sensor could be damaged and lead to malfunction.
- 2. The tensile strength of the cord is PSE530: 23 N, PSE540, 550, 560: 50 N or less. Applying a greater pulling force to it can cause malfunction. When handling, hold the body of the sensor-do not dangle it from the cord.
- 3. Do not use pressure sensors with corrosive and/or flammable gases or liquids.

#### (PSE530)

- 1. Do not exceed the screw-in torque of 3.5 N·m when installing piping. Exceeding this value may cause malfunctioning of the sensor.
- 2. Connecting the sensor cable (optional) Hold the female connector of the sensor cable with your fingers and carefully insert it into the connector.

A connector cover is provided as part of the cable assembly (see the figure below). It is designed to keep the female cover in place, first make sure it is facing in the right direction as you slip it over the female connector, then lock it to the sensor body by turning it clockwise. To remove the cover, first unlock it by turning it counterclockwise, then pull back on it. To remove the female connector, grab it with your fingers and pull back on it. Do not pull on the cable.

#### (PSE540/550)

1. Care should be taken when stripping the outer cable covering as the insulator may be accidentally torn or damaged if incorrectly stripped, as shown on the

right.

Wiring

### 🗥 Caution

#### 1. Connection of sensor connector

- Cut the sensor cable as illustrated Sheath 20 mm or more to the right.
- · Referring to the table below, insert each lead wire of the cable at the position marked with a number corresponding to the color of the lead wire.

· Confirm that the numbers on the connector match the colors of the wires and that the wires are inserted to the bottom. Press

Connector	Wire core color			
NO.	PSE30□	PSE31□		
1	Brown (DC (+))	Brown (LINE (+))		
2	Not used	Not used		
3	Blue (DC ())	Not used		
4	Black (OUT: 1 to 5 V)	Blue (LINE ())		

Part A by hand for temporary fixing.

- · Press in the central part of Part A vertically with a tool such as pliers.
- A sensor connector cannot be taken apart for reuse once it is crimped. If the wire arrangement is incorrect or if the wire insertion fails, use a new sensor connector.
- For connection to SMC 28-C□) or e-con connectors listed below.

 For details about the e-con connector, contact the respective connector manufacturer.

Be sure to read before handling. Refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Safety Instructions and Pressure Switches Precautions.

**Pressure Source** 

### **A** Warning

**1. Use of toxic, corrosive or flammable gas** Do not use **toxic, corrosive and flammable gas**. Also, note that the switch is not explosion-proof.

#### 2. Applicable fluid (PSE530/540/550)

Do not use for corrosive, flammable gases or fluids.

#### (PSE560)

The fluid contact areas are stainless steel 316L (pressure sensor fittings). Use fluid that will not corrode the materials. (For corrosiveness of fluid, consult the manufacturer of the fluid.)

#### 3. Helium leakage test (PSE56□-<sup>A2</sup><sub>B2</sub> only)

Helium leakage test is conducted on the welding parts. Use a ferrule by Swagelok Company (Swagelok<sup>®</sup> fittings) as the TSJ fittings and packing, ground, etc. by Swagelok Company (VCR<sup>®</sup> fittings) as the URJ fittings. If a ferrule, packing or ground by other manufacturers are to be used, conduct helium leakage test before using those products.

\* Swagelok<sup>®</sup> and VCR<sup>®</sup> are trademarks of Swagelok Company.

### 4. About intrusion of water or drainage (PSE560)

Although the pressure sensor of this switch employs a stainless steel diaphragm, there are cases in which the inertial force of sudden irruption at the time of vacuum release after adsorption confirmation causes water, or drainage contained in the air, to strike the pressure sensor and damage it.

In such cases, an intermediate orifice can be set up, or an adapter with external throttle (ZS-31-X175, X186, X188, X189) can be mounted to the fitting part of the main body.

#### **Piping Connection**

### **A** Caution

(PSE550)

- Cut the tubing vertically.
- Carefully hold the tubing and slowly push it into the resin pipe, ensuring that it is inserted by more than 8 mm. For your information, the tensile strength is approx. 25 N when inserted by more than 8 mm.

- Insert the low pressure tubing into "Lo" pipe, and the high-pressure tubing into "Hi" pipe.
- $\bullet$  In cases where SMC tubing is not used, make sure the product has similar I.D. accuracy within ø4±0.3 mm.
- Make sure that the tubing is firmly inserted to avoid possible disconnection. (Tensile strength is approx. 25 N when being inserted 8 mm.)

# Series PSE200/300 Specific Product Precautions 1

Be sure to read before handling. Refer to "Precautions for Handling

Refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Safety Instructions and Pressure Switches Precautions.

#### Controllers

Handling

### **Warning**

- 1. Do not drop, bump, or apply excessive impact (PSE200: 980 m/s<sup>2</sup>, PSE300: 100 m/s<sup>2</sup>) while handling. Although the body of the controller case may not be damaged, the inside of the controller could be damaged and cause malfunction.
- 2. The tensile strength of the power supply/output connection cable is 50 N; that of the pressure sensor lead wire with connector is 25 N. Applying a greater pulling force than the applicable specified tensile strength to either of these components can lead to malfunction. When handling, hold the body of the controller.

Mounting

# **▲** Caution

#### (PSE200)

The front face of the panel mount conforms to IP65 (IP40 when using the  $\Box$ 48 conversion adapter); however, there is a possibility of liquid filtration if the panel mount adapter is not installed securely and properly. Securely fix the adaptor with screws as shown below.

#### Standard

Tighten screws 1/4 to 1/2 turn after the heads are flush with the panel.

#### When using 248 conversion adapter

Handling

### A Caution

#### (PSE300)

#### 1. Mounting with bracket

Mount the bracket on the body with two M3 x 5L mounting screws.

Tighten the bracket mounting screws at a tightening torque of 0.5 to 0.7 N·m.

#### 2. Mounting with panel mount adapter

Secure the panel mount adapter with two M3 x 8L mounting screws.

#### 3. Panel mount adapter removal

To remove the controller with panel mount adapter from the equipment, remove the two mounting screws, and pull out the controller while pushing the claws outward.

Failure to follow this procedure can cause damage to the controller and panel mount adapter.

 Please affix the main body by hooking the claws of the lower part over the DIN rail and pressing in the direction of the arrows as shown in Figure (a).
 When removing the main body, use a flat head screwdriver or similar tool to pull it in the direction of the arrows as shown in Figure (b).

# Series PSE200/300 Specific Product Precautions 2

Be sure to read before handling.

Refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Safety Instructions and Pressure Switches Precautions.

#### Connection

### \land Warning

- 1. Incorrect wiring can damage the switch and cause malfunction or erroneous switch output. Connections should be done while the power is turned off.
- 2. Do not attempt to insert or pull out the pressure sensor or its connector when the power is on. Switch output may malfunction.
- 3. Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Malfunctions may occur due to noise from these other lines.
- 4. If a commercial switching regulator is used, make sure that the F.G. terminal is grounded.

Wiring

# **A** Caution

- 1. Connection and removal of sensor connector
  - Hold the lever and connector body with two fingers and insert the connector straight into the pin until it is locked with a click sound.
  - To remove the connector, pull it out straight while pressing the lever with one finger.

#### (PSE200)

2. Connection of power supply cable and output cable
Securely connect the power supply cable and the output cable to the body until a click is heard.

Wiring

### ▲ Caution

### 3. Applicable crimping terminal dimensions (PSE300T)

An M3 terminal screw is used. If employing a crimping terminal, please use the part shown below.

(Unit: mm)

Please tighten the terminal screw with a tightening torque of 0.3 to 0.35  $N\!\cdot\!m.$ 

#### **Operating Environment**

### \land Warning

1. Our pressure sensor controllers are CE marked; however, they are not equipped with surge protection against lightning. Lightning surge countermeasures should be applied directly to system components as necessary.

#### (PSE200)

• If the product is mounted on a panel, the "IP65" enclosure rating is applicable only to the front parts. Never use pressure sensor in the presence of flammable or explosive gases.
