07	ø0.7	
10	ø1.0	

### 2 Exhaust type

1U With silencer for single unit 3M With silencer for manifold

#### **3** Solenoid valve combination

Symbol	Supply valve	Vacuum release valve
K1	Normally closed	Normally closed
K2 Note 1)	Normally open	Normally closed
J1	Normally closed	None
J2 Note 1)	Normally open	None
Q1	Latching positive common	Normally closed
Q2	Latching positive common	None
N1	Latching negative common	Normally closed
N2	Latching negative common	None

Note 1) In cases when K2 or J2 (supply valve normally open) is selected for the solenoid valve combination, when vacuum is stopped for long periods of time (10 minutes or more), do not continue to energize the supply valve, and shut off the air supply.

#### ④ Pilot valve (Refer to Table (1).)

—	Standard (DC: 1 W) Note 2)
Υ	DC low wattage type (0.5 W) Note 2)
Note 2) Avoid energizing the solenoid valve for	

long periods of time. (Refer to Design and Selection on Specific Product Precautions.)

#### **(5)** Solenoid valve rated voltage

CE

5	24 VDC
6	12 VDC

#### 6 Electrical entry

L	L-type plug connector, with 0.3 m lead wire, with light/surge voltage suppressor	
LO	L-type plug connector, without connector, with light/surge voltage suppressor	
G	Grommet, with 0.3 m lead wire	

#### 7 Manual override Note 3)

_	-	Non-locking push type Latching type: Push-locking type
В		Locking type (Q1/Q2/N1/N2: Not applicable)
Note 3) Latching type supply valve: Available in "—" only. In this case, the supply valve and release valve come with a push-locking type.		

#### 8 Vacuum pressure switch suction filter Note 4)

EA	0 to -101 kPa/NPN open collector 2 outputs, with suction filter
EB	0 to -101 kPa/PNP open collector 2 outputs, with suction filter
EC	0 to -101 kPa/NPN open collector 1 output + analogue voltage, with suction filter
EE	0 to -101 kPa/PNP open collector 1 output + analogue voltage, with suction filter
FA	100 to -100 kPa/NPN open collector 2 outputs, with suction filter
FB	100 to -100 kPa/PNP open collector 2 outputs, with suction filter
FC	100 to -100 kPa/NPN open collector 1 output + analogue voltage, with suction filter
FE	100 to -100 kPa/PNP open collector 1 output + analogue voltage, with suction filter
F	Suction filter only

Note 4) The filter included in this product is of an simple type, and will become clogged quickly in environments with high quantities of dust or particulates. Please make additional use of an air suction filter of the ZFA, ZFB or ZFC series.

#### **∆**Warning

The filter case of this suction filter is made of nylon. Contact with alcohol or similar chemicals may cause it to be damaged. Also, do not use the filter when these chemicals are present in the atmosphere.

#### 1 Check valve Note 7)

—	None
К	With check valve

Note 7) The check valve has a function to prevent the exhaust air from the silencer overflowing to the vacuum port side when a manifold is used. However, depending on usage conditions, it does not always suppress air overflow to the desired extent. During usage, please inspect thoroughly with actual machine.

Also, in order to completely prevent the overflow of exhaust air, leave plenty of space between the check valve unit and adjacent ejector to avoid interference from the ejector's exhaust unit.

#### **Warning**

① Cannot be used for vacuum retention.

② Use a release valve. (Without a release valve, a workpiece may not be released.)

### 12 Fitting (V port) Note 8)

### How to Read Flow Characteristics

Flow characteristics are expressed in ejector vacuum pressure and suction flow. If suction flow rate changes, a change in vacuum pressure will also be expressed. Normally this relationship is expressed in ejector standard use.

In the graph, **Pmax** is max. vacuum pressure and **Qmax** is max. suction flow. The valves are specified according to catalogue use. Changes in vacuum pressure are expressed in the below order.

- When ejector suction port is covered and made airtight, suction flow becomes 0 and vacuum pressure is at maximum value (Pmax).
- When suction port is opened gradually, air can flow through, (air leakage), suction flow increases, but vacuum pressure decreases. (condition P1 and Q1)
- When suction port is opened further, suction flow moves to maximum value (Qmax), but vacuum pressure is near 0. (atmospheric pressure).

When vacuum port (vacuum piping) has no leakage, vacuum pressure becomes maximum, and vacuum pressure decreases as leakage increases. When leakage value is the same as max. suction flow, vacuum pressure is near 0.

When ventirative or leaky work must be adsorbed, please note that vacuum pressure will not be high.

Be sure to read before handling. Refer to "Handling Precautions for SMC Products" (M-E03-3) for Safety Instructions and Vacuum Equipment Precautions.

# **∆**Caution

Refer to the vacuum equipment model selection on Best Pneumatics No.(4) for the selecting and sizing of Series ZQ.

# **Specifications**

#### Ejector

Model	ZQ105	ZQ107	ZQ110
Nozzle nominal diameter (mm)	0.5	0.7	1.0
Maximum suction flow (//min (ANR))	5	10	22
Air consumption (//min (ANR))	14	23	46
Maximum vacuum pressure	–80 kPa		
Supply pressure range	0.3 to 0.5 MPa (Normally open: 0.3 to 0.45 MPa)		
Supply pressure Note)	0.35 MPa 0.43 MPa		
Operating temperature range	5 to 50°C		
Fluid	Air / Inert gas		

Note) Maximum suction flow can be obtained by standard supply pressure.

#### Weight

Single	With suction filter Note 1)	95 g
unit	With vacuum pressure switch and suction filter Note 2)	109 g
	122 g	

Note 1) Including a 0.3 m connector for supply valve and vacuum release valve. Note 2) Including a 0.3 m connector for supply valve and vacuum release valve and a 2 m connector for vacuum pressure switch.

 $\ensuremath{\mathbb{O}}$  Calculation of weight for the manifold type

(Single unit weight) x (Number of stations) + (Weight of end plate assembly for manifold)

Example) Vacuum pressure switch + 8 stations with suction filter

109 g x 8 + 122 g = 994 g

Note) 2 pcs. are included in one set.

### Replacement of V Port Fittings (With vacuum pressure switch)

V port fittings are cassette style for easy replacement.

The fittings are blocked by a clip. Remove the clip with a flat blade screwdriver, etc. to replace the fittings.

When mounting the fittings, after inserting the fitting assembly until it stops, then put the clip into the prescribed position completely.

J2 Note 1)	Normally open	None
Q1	Latching positive common	Normally closed
Q2	Q2 Latching positive common None	
N1	Latching negative common	Normally closed
N2	Latching negative common	None

The air in the adsorption section of this product is not released to the atmosphere at the vacuum suspension state. As for K1, K2, Q1 and N1, use the vacuum release valve when a workpiece is detached.

Concerning J1, J2, Q2 and N2, devise the circuit for the vacuum release additionally when a workpiece is detached.

Note 1) In cases when K2 or J2 (supply valve normally open) is selected for the solenoid valve combination, when vacuum is stopped for long periods of time (10 minutes or more), do not continue to energize the supply valve, and shut off the air supply.

#### ③ Pilot valve (Refer to Table (1).)

		-	-		-	-		

Note 1) The above dimensions are for ZZQ104-LOC.

- \* ZQ1000M-K1 6<sup>5</sup>L-E G-00-Q.
- ∗ ZQ1000M-K2<sup>5</sup>L-E□G-00-Q.
- \* ZQ1000M-J1056L-F-00-Q.
- \* ZQ1000M-Q1<sup>5</sup><sub>6</sub>L-E\_G-00-Q.
- \* In case of ZQ1000M-\_\_\_\_-F-00-Q, the overall length is 91.7.
- \* In case of ZQ1000M-\_\_\_\_\_E\_G-00-Q, the overall length is 112.

- Note 4) The pitches of V ports are determined assuming the use of the KJ series one-touch fittings. If used with other fittings, these may cause interference, dependant on their type and size. Please refer to the catalogue to confirm the sizes of the fittings to be used.
- Note 5) When the vacuum release valve is not used, design the circuit for vacuum release separately in order to release a workpiece.

(mm)

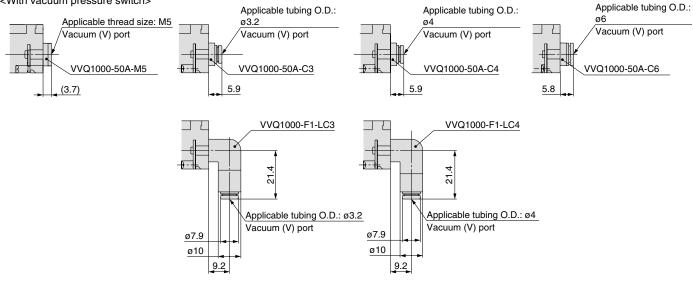

### Dimensions

#### Fittings / Fitting type filter dimensions after installation

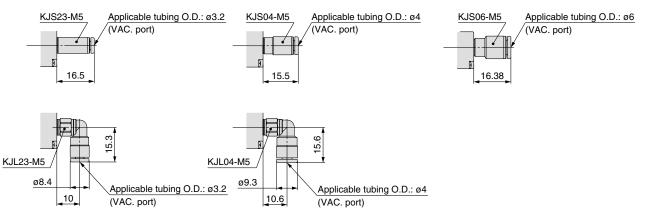

#### V port

#### V port

<Suction filter only>

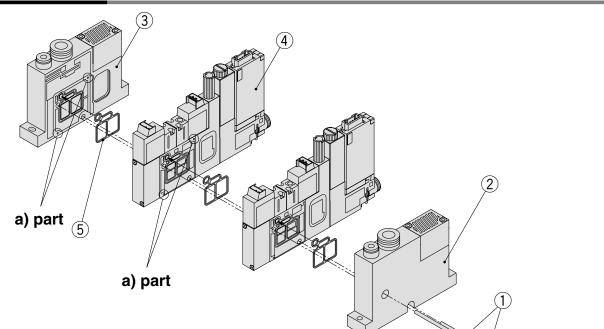

#### PS / PV port (for pump)

# Manifold Exploded View

#### **Component Parts**

No.	Description	Description Part no.		
1	Hexagon socket head cap screw	Refer to "How to Order" belowQ		
2	End block L	Refer to "Table (1)".		
3	End block R Refer to "Table (2)" (including 1 pc. of (5))			
4	Vacuum pump system assembly	ZQ1000MQ Note 1) (including 1 pc. of (5)).		
5	Ejector body gasket for manifold	ZQ-3-005-10AS Note 2)		

Note 1) Refer to pages 15 and 16 for detailed description of "How to Order".

Note 2) 10 pcs. are included in one set.

#### Working Procedure

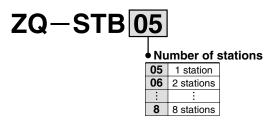

#### Disassembly

Loosen and remove the clamp rod  $\bigcirc$ .

#### Assembly

- 1. Install the ejector body gasket for manifold (5) into the gasket groove of each vacuum pump system assembly (4).
- 2. Install the ejector body gasket for manifold (5) into the gasket groove of the end block R (2).
- 3. Align the ejector assemblies ④, end block (L) ②, and end block (R) ③ using positioning pins (at the two "a" positions) and fasten with clamp rods ① (2 pcs.) (with a tightening torque of 0.6 N•m ± 0.06 N•m).

### How to Order Hexagon Socket Head Cap Screw

Note) 2 pcs. are included in one set.

### Replacement of V Port Fittings (With vacuum pressure switch)

V port fittings are cassette style for easy replacement.

Table (1)

Table (2)

The fittings are blocked by a clip. Remove the clip with a flat blade screwdriver, etc. to replace the fittings.

When mounting the fittings, after inserting the fitting assembly until it stops, then put the clip into the prescribed position completely.

# Series ZQ Specific Product Precautions

Be sure to read before handling. Refer to "Handling Precautions for SMC Products" (M-E03-3) for Vacuum Equipment Precautions.

#### **Design and Selection**

# **A**Warning

#### Avoid energizing the solenoid value for long periods of time.

If a solenoid valve is energized for a long period of time, the coil will get hot and the performance may be reduced. Additionally, the peripheral equipment in close proximity may also be badly affected. Use a low wattage solenoid valve when the solenoid valve is energized continuously or when the duration of the energization is longer than the non-energized period each day. Periods of energization can be shortened by using a normally opened or latching type solenoid valve. But, do not energize the coil on both A and B sides simultaneously when using the latching type.

Continuous energization of the solenoid valve should be less than 10 minutes in duration and the energization period should be shorter than the non-energized period. Take measures for any heat radiation so that the temperature is within the range of solenoid valve specifications when the solenoid valve is mounted on the control panel. Please pay special attention to any temperature increases when a manifold type with 3 stations or more is energized continuously or when three individual units are placed in close proximity.

# 2. Use the vacuum equipment within the operating supply pressure range.

When the operating with a lower supply pressure, the vacuum performance will be reduced and the poppet valve will cause malfunction.

Never use the vacuum equipment more than the operating supply pressure range as this may cause damage to the product resulting in potentially dangerous operation.

#### 3. Suspension of operation for long periods of time

Please use caution — as detailed below — when the vacuum equipment is turned off for periods in excess of 6 hours.

• Be sure to turn off the pressure supply to the vacuum equipment.

Please observe this precautions as the supply pressure will be applied for a extra period of time due to the line pressure increase and may result in damage to the vacuum equipment.

Be sure to turn off the power supply to the solenoid valve and the pressure switch.

Please observe this precautions as any heat generated due to the length of energization time may seriously affect the vacuum equipment and peripheral equipment resulting in potentially dangerous operation.

#### 4. Check valve

The check valve has a function to prevent the exhaust air from the silencer overflowing to the vacuum port side when a manifold is used. However, depending on usage conditions, it does not always suppress air overflow to the desired extent. During usage, please inspect thoroughly with actual machine. Also, no guarantee is therefore provided when used for any other purposes. It is especially dangerous if used for the purpose of workpiece drop prevention in the case of operator blackout. Therefore, please take additional measures for providing drop prevention, such as providing a guide.

#### 5. Exhaust port (EXH port) on the vacuum ejector

Please check the exhaust port (EXH port) on the vacuum ejector, so that any exhaust resistance will not be increased due to insulating materials or restrictions in the piping. The exhaust resistance may reduce the ejector's performance. Additionally, never use this product in an application where the exhaust port is blocked when detaching a workpiece. This misuse may result in possible damage to the product.

# **≜** Warning

#### 6. Vacuum release flow adjustment needle

Adjust the vacuum release flow adjustment needle from the fully closed to the open state by 1/8 to 1/4 turns to detach a workpiece completely during the ON time of a release valve. Do not supply compressed air while the vacuum release flow adjustment needle is adjusted. Securely lock it with a lock nut after adjustment.

#### 7. How to use the latching type solenoid valve

Our Latching type solenoid are fitted with a self-detaining mechanism. Its construction features an armature inside the solenoid which is set or reset using spontaneous energization. (10 ms or greater) Therefore, continuous energization is not required.

#### How to Use the Latching Type Plug Connector

#### Wiring specifications

 Wiring should be connected as shown below. Connect with the power supply respectively.

#### DC positive common

DC negative common

	Set	Lead wire colours
s_	(Vacuum generation)	(+) Red
itatio	E COM.	(–) Black
	Reset	(+) White
122	(Vacuum suspension)	

Special care must be taken for the latching type.

- Avoid using this product with a circuit which electrifies both the set and reset signals simultaneously.
- 2. The minimum energization time required for self-detaining is 10 ms.
- Please contact SMC when using this product in locations where there are vibration levels of 30 m/s<sup>2</sup> or above or highly magnetic fields. No problems arise in normal usage or locations.
- 4. This valve retains the reset position (Flow path: A → R) at the time of shipment. However, it may alter to the set position during transportation or due to vibration when mounting the valve. Therefore, confirm the home position either manually or

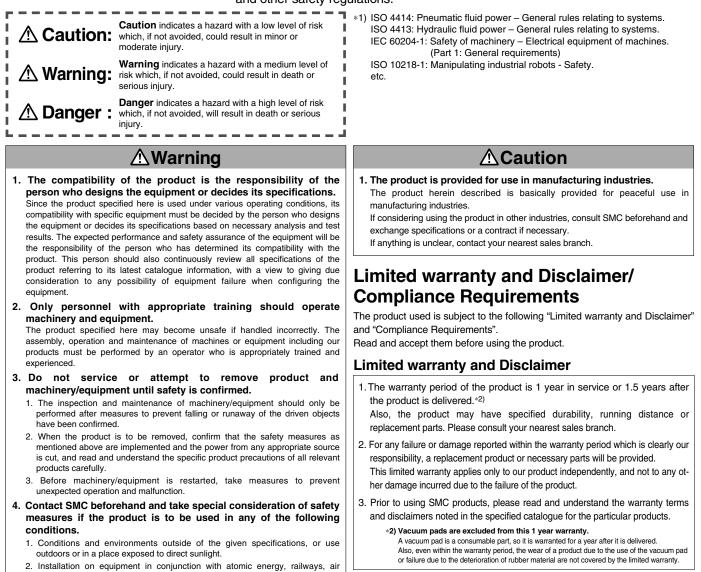

#### Mounting

# **A**Warning

1. Screw tightening torque for mounting the body should be performed with 0.6 ± 0.06 N⋅m. Excessive torque may damage the product.

# **▲** Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "**Caution**," "**Warning**" or "**Danger**." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\*1), and other safety regulations.

#### **Compliance Requirements**

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

A Safety Instructions Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.
